

To HR director, medical director, health and safety officer, and your boss

Dear _____

I have been told to get a Covid-19 injection or risk losing my job. As a licensed nurse, I practice the doctrine of informed consent and understand that neither doctors nor the health system can conduct experiments on patients.

Please tell me exactly what is in each of the injections you are requiring me to take. What are the ingredients, and in what proportion? Please include the Material Safety Data Sheet (MSDS) on any ingredients in the injection that are not listed in the Merck Manual or the Physician's Desk Reference (PDR).

Please tell me the half-life and Median Lethal Dose (LD50) for all of the substances that are on the ingredients list. Additionally, as all medical practitioners know, not all drugs are for everyone.

Please inform me of all the known side-effects and contraindications of all of the possible acceptable injections.

It is my understanding that "vaccines" are pharmaceutical substances available by prescription only. In my case, who is the prescriber, and what is the medical justification for the prescription?

Finally, what is the *absolute risk reduction* (the absolute risk reduction is the total reduction in risk, that results by choosing a given treatment) associated with each of the preparations, as defined by data from the manufacturers' trials?

Very truly yours,
