

To the Principal,

After listening to many school parents of over the last 18 months, I would like to voice my concerns over the pushing of the experimental Covid vaccine on our young high school children. I am extremely disappointed that the school is participating in this experiment which could cause serious harm to our young people who would never be at risk of harm from Covid. As we all know, from all global data, children don't die FROM Covid. Any authority that tries to infer they are at risk, should be treated with contempt. Thus, I strongly object to our children being used as human shields.

Are there not serious questions that we, the school community, should be pushing back to authorities to answer?

What diagnostic tool do they use to differentiate between the original Covid virus and the Delta strain? Is this tool fit for this purpose? The USA & UK are phasing out (& in some cases is already phased out) the PCR as it cannot distinguish between flu, differing Covid strains & the common cold.

According to the Australian Bureau of Statistics, Covid was listed as the 39th cause of death in Australia in 2020. The average Covid death age was 86yrs old!! So how does this justify vaccinating young people who are not effected by Covid?

Over 60,000 adverse events have been reported to our TGA after receiving the covid vaccine, and sadly over 500 deaths in Australia according to our TGA. These are just the ones reported, so there may be many, many more that go unreported (*see statement below from Qld Govt). Have these been adequately investigated? And if so, why has the public not been notified of this information so we can all make a more informed decision? Is this not part of informed consent?

Are the vaccine ingredients made readily available to children to make informed consent? Even if the ingredients were given to our children, are they mature enough, from 12yrs, to make an informed decision as to whether those ingredients are something they are happy to have in their bodies for the short term & the unknown long term?

Myocarditis, Pericarditis & PVT numbers in young people are currently over 300 according to the TGA, so why are these vaccines still being given to the young & healthy? (*see example from today below)

Scandinavian countries have banned the Moderna vaccine due to Myocarditis concerns in young people. So why is this vaccine still used in Australia? Is there a political & financial agenda?

The vaccines have been issued 'Provisional' approval until the clinical trials are completed in the first half of 2023. In other words, they are still in the experimental phase. So why are experimental vaccines being mandated at all? Especially in our young people in certain industries who are not at risk?

This is a direct violation of the Nuremberg Code & our own Constitution. So how is this ethical?

Why are effective therapeutic drugs used successfully overseas banned in Australia? India, Africa, South America & many other countries have now successfully treated millions of their population with Ivermectin & various other well researched drugs that have been around for decades. Why are our young people not offered such solutions as an inexpensive, safe & effective treatment in the very, very unlikely event that they would ever get sick from Covid, rather than taking an experimental vaccine with unknown long term side effects? So is this about politics, money or the health of our children?

Why are all Australian Doctors threatened with loss of their medical license if they speak against vaccines? Again last week, Doctors were threatened in writing with their licences being removed if they issued medical exemptions to patients. Is this not putting their patients life at risk & denying the Doctor their duty to keep their Hippocratic Oath? So even if our young people are at risk from a serious adverse reaction to this vaccine, they cannot get an exemption from their own Doctor. Is this not medical tyranny? And there is no liability from Big Pharma, so no compensation for our children if they are vaccine damaged.

These and so many other questions are the ones being asked by concerned parents in this community and we need the answers. Everyone wants our community to be safe. This includes the safety of our young people, as they are our future. So when our government & media use propaganda such as “vaccines are our ticket out of here” as their ‘reason’ we should all be alarmed & pushing back onto our government and health authorities to answer our questions. Please help us to do this. As a community, we need to protect our precious children, not use them as human shields.

I look forward to hearing back from you, and will leave you with this image below from Qld Senator Gerard Rennick’s facebook post today about this poor young girl, Cienna Donnelly, who is fighting for her life after the Pfizer vaccine here in Qld (I note there is no media coverage, as usual – why is this?)

Yours Sincerely
